

Status quo

Frontend frameworks:

- Tightly coupled with UI framework (e.g. Next.js $\Leftrightarrow$ React, Nuxt $\Leftrightarrow$ Vue)
- Impose their priorities (e.g. Next.js Server Components)
- 100% "free" $\Rightarrow$ skewed interests

Unstable $\Rightarrow$ but stability is crucial for large projects:

- Shouldn't be forced complex refactors
- Should adopt new technology at their own pace
- Should be able to adopt new technology progressively

Vike

A fundamentally new approach.
