

SPA/SSR/SSG

SSR/SSG:

- HTML streaming
- Progressive rendering (aka partial hydration)

SPA/SSG:

- `+prerender` (boolean) ⇒ disable/enable (on page-by-page basis)
- `+ssr` (boolean) ⇒ toggle SSR/SPA (on page-by-page basis)
- `+data.client.js` ⇒ 100% client-side data fetching
- SSG redirects
- 🚧 SSG dynamic routes (aka SPA fallback)

Easily create SPA like the old days.

⇒ surprisingly hard with other frameworks (but shouldn't!)
